HOW TO READ THIS REPORT

This is not a typological endpoint. It is a practical energy route that helps you see what feeds you, burdens you and brings you back into balance in professional interaction. The EG-code is never read as a label, but always as a language for energy in behaviour. Read the profile as a friendly mirror — not to pin yourself down, but to engage more consciously with your energy in connection with others.

01 Your energy at a glance

What you give, what you need, where energy drains away and how you regain balance.

ENERGY FLOW

T/RbIIIO

task-oriented · relational · decisive · distinctly introverted · observant

ENERGY COST

-g

group as an energy cost

EG = Energetic Behaviour · energy mode: distinctly introverted

GIVES ENERGY

You give energy by choosing a direction, cutting through knots and getting people moving together toward a concrete result.

RECEIVES ENERGY

You recharge when there is pace, challenge and clear goals, and you can make visible progress.

LOSES ENERGY

Having to be constantly in the group drains energy when there is too little space for focus or rest.

RESTORES ENERGY

Build in moments of rest and focus, and protect space to recharge outside the group.

THE CORE MOVEMENT

— brings a goal-oriented, decisive flow of energy that sets movement and results in motion to collaboration.

02 The reading in 2 minutes

A compact summary of how this energy spontaneously works in collaboration.

— spontaneously gives energy by choosing direction, creating momentum and bringing people along toward a concrete result.

Flowing naturally

— stays in energy when there are clear goals, pace and space to make decisions and move forward.

Consciously
aligning

Energy drains predictably in one place. Having to be constantly in the group drains energy when there is too little space for focus or rest.

Under pressure

Under stress, energy can accelerate, harden or withdraw. For those around you, this can feel as though the usual engagement suddenly shifts into tension or distance.

IN ONE IMAGE

— flourishes in contexts where clear goals, pace and space to make decisions come together.

03 What does the 2MINSCAN measure?

The 2MINSCAN describes energetic behaviour in a professional context: how someone gives, receives, retains and loses energy in collaboration.

Behaviour

What someone spontaneously shows in interaction with colleagues, teams, employees or coachees.

Energy-effect

How that behaviour opens, strengthens, blocks or puts energy under pressure.

Work context

Which environment supports, brings out or drains this behaviour.

NOT TO BE USED AS

Not a talent test. Not a passion measurement. Not a selection instrument. Not a potential assessment. Not a diagnosis.

USE IT FOR

Reflection, coaching, team development, leadership development, communication and context alignment.

04 How your energy moves

The EG-code is not read here as a label, but as a language for energy in professional behaviour.

T

Task-oriented

Energy goes first toward what concretely needs to happen: facts, results and delivering on the task.

R

Relationship-oriented

Energy starts when alignment with others feels safe, respectful and genuine.

b

Decision-oriented

You give energy by cutting through knots, choosing a direction and getting into motion.

II

Distinctly introverted

You recharge primarily by turning inward: reflecting, processing internally and bringing order before stepping outward.

0

Observant

You perceive consciously and through your senses in the here and now, and pause to notice what you concretely see.

-g

Group as an energy cost

Having to be constantly in the group costs energy when there is too little space for focus or rest.

05 How you give energy to others

This is how others experience your energy style in collaboration.

GIVES ENERGY

You give energy by choosing a direction, cutting through knots and getting people moving together toward a concrete result.

RECEIVES ENERGY

You recharge when there is pace, challenge and clear goals, and you can make visible progress.

How others experience you

Decisive, clear, goal-oriented, resolute and focused on progress.

How you experience a team

As a system that needs direction and pace in order to achieve results.

06 What you set in motion in teams

How your energy has an effect on others — without reading this as talent or evaluation.

Drive

You create movement where others keep hesitating and help a team move forward.

Direction

You sharpen goals and keep the focus on what truly matters.

Decision-making

You dare to make choices and thus lead a group out of a deadlock.

Results

You keep the end goal in sight and translate energy into concrete steps.

WHAT THIS DOES IN COLLABORATION

Your energy sets things in motion in a team: goals become sharper, decisions faster and the group moves forward.

07 The context that recharges you

Energy arises in the interplay between your behaviour and the environment in which you work.

Culture

Gives energy

Results-orientation, autonomy and space to make decisions.

Requires attention

Watch out when pace pushes aside relationships or thoroughness.

Work rhythm

Gives energy

Challenge, momentum and visible progress.

Requires attention

Watch out with slow processes without a clear goal.

Leadership

Gives energy

Space for initiative and clear responsibility.

Requires attention

Watch out with micromanagement or vague direction.

08 Where energy drains away

Energy loss becomes visible when the environment leaves too little space for what naturally feeds you.

Constantly in the group

No space for focus

Too many social stimuli

No moments of rest

Having to be available at all times

WHY THIS COSTS ENERGY

Having to be constantly in the group drains energy when there is too little space for focus or rest.

WHAT HELPS

Build in moments of rest and focus, and protect space to recharge outside the group.

LEGEND OF THE EG-CODE

Capital letters show what gives energy or drives direction in behaviour. A minus sign shows an energy cost. In T/RbIIIO-g, -g means this part costs more energy than it gives.

09 When energy comes under pressure

Stress reflexes do not show who you are. They show where energy is under pressure and where deliberate slowing down helps.

ongeduldig

afstandelijk

koppig

NO JUDGEMENT, JUST INFORMATION

These signals become useful when you see them as an invitation to slow down, name your boundary and realign. Knowing your shadow side helps you find the positive core behind it.

10 Collaborating with profiles that operate differently

Some profiles gain energy from a very different style. In that case it helps to make your style more translatable.

YOUR NATURAL STYLE

Decisive
Goal-oriented
Resolute
Fast-paced

STYLE THAT REQUIRES ADJUSTMENT

Relational
People-focused
Attentive to atmosphere
Connecting

BRIDGING BEHAVIOUR

Slow down deliberately, ask first how people are doing and make room for the relationship before switching to content or results. Name the reason behind your choices and offer recognition.

THE BRIDGE SENTENCE

You do not need to lose your style. You simply make it more receivable for people who recharge differently.

11 Leadership, equivalents and integrity in use

Leadership is read here as energy-effect on others, not as formal power or position.

Giving direction

You give direction by sharpening goals and cutting through knots.

Maintaining pace

You keep the momentum going and prevent things from stalling.

Building trust

Your leadership grows when you link decisions to listening.

Protecting boundaries

Your energy stays sustainable when you do not try to force everything on your own.

RELATIONAL ENERGY-EFFECT

This profile points to leadership that strengthens direction, decision-making and results-orientation.

MBTI equivalent

géén

Indicative language, not an official MBTI test result.

Insights Discovery

Wheel position 121-141

Rood Groen / Blauw - Geel

Additional language, not an official Insights result.

IMPORTANT SCIENTIFIC NUANCE

The 2MINSCAN is based on Jungian-inspired preferences. That theory has not been validated in the same way as modern psychometric models. It can nevertheless offer a useful language for making group dynamics, preferred behaviour and energy needs discussable in a professional context. The 2MINSCAN makes no statements about who someone is, what their potential is or why they show this behaviour.

IF YOU WANT TO LOOK DEEPER

When the question is no longer about energy management but about the why behind preferred behaviour, underlying patterns or deeper characteristics, a TaPas Kompas can be a careful next step.

Keep moving with your own energy by first determining direction for yourself and then stepping outward with purpose

Energy is not a fixed label. It is a movement between you, the other person and the context in which you work.

WHEN YOUR ENERGY FLOWS

You feel more space and calm to work from within yourself and connect at your own pace.

WHEN ENERGY DRAINS

Do not see it as a failure, but as a signal to slow down, set a boundary or realign.
